

Rubber Lining Systems

FIRST ENERGY COATING SERVICES

Rubber Linings are a premium form of corrosion protection for some of the most severe chemical and abrasive environments. FECS is a recognized expert in applying rubber linings for industries such as mining, water, power, oil, steel, and chemical. With broad in-house and field know-how's, FECS provides turnkey service with unique solutions for challenging corrosion problems. Our well-trained personnel advise, install and support our customers in a flexible manner and with a distinctly high degree of technical competence.

FEATURES

- ▶ Very Durable
- ▶ Extremely Flexible Liner
- ▶ Good Chemical Resistance
- ▶ Excellent Abrasion and Impact Resistance
- ▶ Also Food Grade Certified (Specific Rubber Types)

APPLICATION

- ▶ Internal Scrubbers
- ▶ Internal Slurry Tanks
- ▶ Internal Hydrochloric Acid Tanks
- ▶ Internal Sand Filters / Seawater Filters
- ▶ Internal Seawater Tanks (Concrete & Steel)

Coatings & Linings

FIRST ENERGY COATING SERVICES

INSTALLATION

Rubber Lining is applied on a well prepared surface and installed by a qualified crew, using the right equipment. After application of an epoxy primer by our experts and a bonding agent the rubber is hand applied and Solewant installs an extensive range of hard and soft, pressure and atmospheric cured sheet elastomeric compounds, including: natural rubber, ebonite, chlorobutyl, polychloroprene and PVDF.

The thickness of the rubber lining system normally varies between 3mm and 6mm depending on the exposure conditions and specifications.
